PROFESSIONAL SUMMARY

Computer Science (AI-ML) student with strong skills in **machine learning** and **frontend development**. Builds responsive, accessible interfaces with **React** and **TypeScript**, backed by solid **UI/UX** and visual design foundations, and develops ML models and APIs using **PyTorch**, **FastAPI** and semantic search. Hackathon winner and freelance designer/developer who enjoys turning ideas into polished, production-ready products.

EDUCATION

Manipal University Jaipur 2024 – 2028
B.Tech in Computer Science and Engineering (AI-ML) *CGPA: 9.5 / 10*

TECHNICAL SKILLS

Languages:	Python, C, SQL, C++
Core CS:	Data Structures and Algorithms, OOP, RDBMS, Time & Space Complexity, OS
Backend:	FastAPI, RESTful API Design, Node.js
Databases:	PostgreSQL, Supabase, Vector Databases, Query Optimization, Database Indexing
Cloud & DevOps:	Docker, AWS (EC2), API Deployment, CI/CD
GenAI & LLMs:	LangChain, LangGraph
ML & Data:	TensorFlow, Scikit-learn, Pandas, NumPy, Model Evaluation
Tools:	Git, GitHub, VS Code, Copilot, Logging, Debugging, SDLC, Figma, Photoshop, Canva

EXPERIENCE

Doggle India Nov 2025 – Jan 2026
Frontend/Graphic Design Intern *Paid-Remote*

- Built responsive UI components using **React.js**.
- Integrated interactive 3D elements with **Three.js**.
- Designed marketing and product creatives using **Figma**, **Canva**, and **Photoshop**.
- Developed reusable components to improve **scalability** and **workflow** efficiency.

PROJECTS

ResearchLens *(Python, FastAPI, MongoDB, React, TypeScript, sentence-transformers)* [GitHub] 2026 – ongoing

- Built a research-paper discovery engine on **FastAPI** and **MongoDB**, ranking results with hybrid semantic (**MiniLM** embeddings) and keyword search plus recency and citation signals, with a score explanation on every result.
- Added live ingestion from **arXiv** and **OpenAlex** when coverage is thin, with cross-source deduplication and similarity thresholds, and shipped a **React** UI with in-page PDF reading, deployed via **Docker** and **Render**.

Ecodrop - Smart Waste Management System *(React, TypeScript, Vite, React Hooks)* [GitHub] 2025

- Built a smart waste management platform with categorization, scheduling, rewards, and tracking using **React** & **TypeScript**.
- Added **analytics, volunteer management**, and validated forms for a scalable user experience.

Breast Cancer Detection using Machine Learning *(ResNet, CBIS-DDSM, PyTorch)* 2026

- Developing a **ResNet**-based **PyTorch** model trained on the **CBIS-DDSM** dataset for automated breast cancer classification.
- Building a web platform where users can upload **mammograms** and reports for **AI-assisted analysis** and prediction.

Netflix Clone *(React, TMDB API, CSS)* [GitHub] 2025

- Built a responsive Netflix-style streaming UI with **React**, **Firebase Authentication**, and live **TMDB** movie data integration.
- Implemented dynamic movie rows, hero banners, scroll-aware navbar, and real-time user auth with responsiveness for a polished user experience.

Intellectual Arena - AI Debate Arena *(React, TypeScript, Radix UI, Vite, Zod validation)* [GitHub] 2026

- **AI Debate Platform** – Interactive arena to debate AI opponents with scoring & analytics.
- Built with **React + TS – Vite, Tailwind, React Query**; fast, modern, deployed on Vercel.

ACHIEVEMENTS

Manipal Innovation Hackathon (MIH) 2026
Organised by MUJ E-CELL

- Won at **MIH Phase I** by building **AI Debate Arena** – an interactive platform for AI-powered debates.
- Real-time AI feedback on **logic, clarity & relevance**, with gamified scoring and **AI vs AI** simulation mode.

DevHeat - IIIT Surat 2026

- Secured **6th Position** at **DevHeat Hackathon, IIIT Surat**, competing among 70+ national-level teams.

Hack with Uttar Pradesh 2025

- Secured **12th position** at **Hack With Uttar Pradesh**, a National-level hackathon sponsored by Blackbox AI.
